

CONSER Use of 008/39 (Cataloging Source) Codes in Serial Records (Except by National Libraries) As of May 1, 2009

	Value in 008/39
New CONSER Record	c
Previously Authenticated Record ➤ Previously with “ <i>blank</i> ” in 008/39 ➤ Previously with “ c ” in 008/39 ➤ Previously with “ d ” in 008/39	<i>blank</i> c c
Previously Non-Authenticated Record ➤ Previously with “ <i>blank</i> ” in 008/39* ➤ Previously with “ c ” in 008/39 ➤ Previously with “ d ” in 008/39 ➤ Previously with “ u ” in 008/39	<i>blank</i> c c c

Note: National Libraries in CONSER (Library of Congress, Library and Archives Canada, National Library of Medicine, etc.) are continuing after May 1, 2009, the same practices for coding 008/09 for original and previously unauthenticated OCLC records as they applied before then, rather than the ones shown above.

* Retain value “blank” because the previously non-authenticated record is a transcription of a national library’s record. Use value “c”, instead, if you believe that is not the case and value “blank” is a coding error.
